(54) Title: POLYPROPYLENE-BASE MOLDED ARTICLE AND CONTAINER

(57) Abstract: One of the objects of the present invention is to provide a molded article excellent in all of transparency, impact resistance, flexibility and blocking resistance. The present invention provides the polypropylene-base molded article of the present invention is a single-layer or multilayer molded article having a layer comprising a thermoplastic resin composition containing a polypropylene resin composition (A) satisfying the following requirements and an ethylene-base copolymer (B) comprising an ethylene. and at least one a-olefin having 4 or more carbon atoms. The polypropylene resin composition (A) is a composition where a polypropylene component (C) and a copolymer elastomer component (D) of propylene, ethylene and/or a-olefin having from 4 to 12 carbon atoms are contained each in a specific range, the melt flow rate is in a specific range, the content of the unit originated in the propylene in the copolymer elastomer component (D) is specified, and the xylene-soluble portion X₅ satisfies specific requirements.
